

Vaccine Temperature Monitoring in the Cloud

Galileo invented the
thermometer.
We made it better!

\$30+gst/month, free hardware!

Introducing the world's simplest
vaccine cold-chain monitoring solution.

Galileo is a small battery powered device that sits in your vaccine fridge to constantly monitor temperature. Galileo is connected to the Telstra mobile phone network and will instantly send an alarm to your phone and email if the temperature falls outside the acceptable range of 2 to 8 degrees Celsius. Galileo alerts you to cold-chain breaches, checks that your alarms have been acknowledged and provides online access to continuous 15 minute logged data for your vaccine storage.

- Simple installation, just put it in your fridge
- No software installs, works in the cloud
- Instant Alarms via SMS and email
- Automatic backups
- Support included
